Boolean Operators

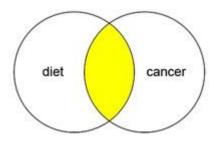

Boolean Operators

Boolean Operators help to focus your search by linking your search terms. There are three words that are used as Boolean connectors, AND, OR and NOT.

Boolean AND

AND locates records containing both terms. For example, a subject search on "diet AND cancer" locates records that contain information on both diet and cancer as indicated by the overlapping yellow area below.

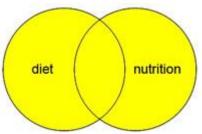

Use AND to combine two ideas when both are important to our search

Boolean OR

OR locates records matching any or all of the specified terms. For example, a search on "diet **OR** nutrition" locates records that contain information only about diet, records only about nutrition, and records that contain information on both diet and nutrition. **OR** expands your search.

Use to include synonyms or alternate terms in your search.

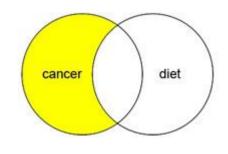

Boolean NOT

NOT locates records containing the first term but NOT the second. For example, a search on "cancer NOT diet" locates records only about cancer, and excludes any records about diet that also contain information about cancer.

Excludes records containing the second term.

Caution! It's easy to exclude relevant items.

Boolean Operator Examples		
Boolean Operator	Examples	Retrieves
AND	children AND poverty diet AND cancer	AND combines different terms when both must be present. Use AND to narrow a search.
OR	children <mark>OR</mark> youth	OR combines either synonymous terms when at least one must be present.
	cats <mark>OR</mark> dogs	OR also locates records that contain information on all the terms selected.
	Generation X OR Generation Y	Use OR to broaden a search.
NOT	juvenile NOT crime	NOT eliminates irrelevant terms from a search.
	Richard Nixon NOT Watergate Men NOT women	Use NOT when you want to exclude all records that contain a term.
	Richard Nixon - Watergate	A – sign can also be used to limit
